Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1894 Excerpt: .applied. Mr Stromeyer asked the diameter of the turbine. Professor Jamieson said that he did not know the diameter of a 50 H.p. one, but the outside diameter of the turbine casing of the 5 H.p. one which he saw at Chicago would only be about one foot. That was the one designed for 22,000 revolutions per minute. Mr Macwhirter said that Mr Morton might let them know what sort of boiler he used. He (Mr Morton) said that they required 87 lbs. steam per brake horse power per hour. That was something like 10 lbs. of water evaporated per lb. of coal. They did not find that the practice in Glasgow, and it would be interesting to know what kind of boiler he used. Mr George Russell said there was no mistake that this was a very peculiar engine, and that it was a sort...
