No claims are made in regard to the discovery of new facts in the science of arithmetic. While the manner of presenting the topics to the class, the, method of illustration, exemplification, and practice have been used by the author for many years, no published work has ever been issued handling the science in this extremely practical manner. Particular attention is called to the different parts into which the work is divided. Class Work, Homework, Test, and Final Examinations, each has its place in the development of every topic. The topics are made largely independent of one another, so that students entering school at different times may take up the work together.
